## **Company Profile**

Data Motion Devices Corporation designs and manufactures electronic products for the industrial and commercial markets. We provide contract engineering services, and full turnkey development of custom OEM products. We also offer low to medium volume contract manufacturing.

## **Overview**

Data Motion Devices dates back to 1952. In 1990 the company moved to the State of Virginia and changed incorporation to Virginia. Initial electronic products were developed for the adhesive labeling industry. Today our products have grown and expanded to other industries and are used throughout the world. Our growth and success is based on taking pride in providing reliable, high quality products that have proven themselves in use day after day.

## **Engineering Services**

Data Motion Devices has designed a wide variety of electronic products. We have experience with industrial controls, machine automation, sensors, battery charging and battery gas gauging. Areas of expertise include:

- Analog, and Digital Electronic Design
- Embedded Microcontroller Design
- Motion Control
- PID Control
- Industrial Sensors, Discrete and Process Control
- Thru-Hole to Surface Mount Design
- Redesign due to Obsolescence
- Fiber Optics

## **Manufacturing Services**

Data Motion Devices Corporation has facilities to provide complete manufacturing of thru-hole prototypes and low to medium volume production. We keep a large inventory of microcontrollers and key components so that we can quickly develop prototypes. Every product Data Motion designs and manufactures withstands rigorous testing, inspection and quality control to ensure the highest level of reliability.

- Thru-hole assembly
- Harness and Cable Assembly
- Surface mount prototyping
- Full receiving inspection
- Complete component control
- ESD Protection
- 100% inspection and product testing

In addition to our on site manufacturing capabilities Data Motion Devices Corporation works closely with an entire network of manufacturing resources to provide a complete turn-key solution to our customers. Our design capabilities are enhanced by our ability to provide finished product through our network of resources.

Services we have access to through our resources network include:

- High volume contract assembly
- Printed Circuit Board Design and Artwork, Gerber & NC Files
- Printed circuit board fabrication
- Mechanical design and engineering services
- Plastic injection mold development
- Membrane switches, labels, graphic overlays
- Metal fabrication, stamping and painting
- Certification services
